MOSAIC

Ground truth at scale.

Physical world intelligence — on demand, AI-extracted, instantly.

Confidential · Seed Round · March 2026

▶ View Interactive Demo

THE PROBLEM

The physical world is opaque — and everyone pays for it.

CPG BRANDS

4–8%

Revenue lost to out-of-stocks they never knew about. The brand manager has 50,000 stores. They visit 2,400 per year.

RETAILERS

2 weeks

To verify shelf compliance — minimum. At $50–$300 per store visit. Covering less than 5% of locations.

THE MARKET

$35B

Spent annually on physical world intelligence. Most of it produces data that's already outdated when it arrives.

$50–$300	2–3 weeks	<5%	Zero
Per store visit today	Time to complete field audit	Of locations ever covered	Machine-readable output

The physical world generates no data unless someone deliberately captures it.

THE SOLUTION

Mosaic turns any smartphone into a verified intelligence collection device.

ENTERPRISE

Posts a task: "Check oat milk compliance at 50 stores"

90 seconds to post

→

MOSAIC ROUTES

Matches 12 agents already near those stores — on their commute

Real-time matching

→

AGENTS CAPTURE

Photos taken, on-device face redaction, quality validation before upload

45 seconds per task

→

AI EXTRACTS

GPT-4V converts photos → JSON: compliance scores, anomaly flags, structured data

$0.20 per image

→

INTELLIGENCE

"6 stores out-of-stock. 3 wrong placement. 41 compliant." — in 4 hours, not 3 weeks.

API or dashboard

4 hrs
To deliver field audit results
(vs 2–3 week industry standard)

$8–25
Per task (vs $50–300
for traditional field audit)

90%+
AI extraction accuracy
for structured shelf data

50M+
Gig workers globally
already at the locations

WHY NOW

Three forces converged in 2026 that make Mosaic possible — and defensible.

1

On-Device AI

MediaPipe + TFLite run face redaction in real-time on any 2020+ smartphone. GDPR compliance without a cloud roundtrip. No biometric data ever leaves the device.

This wasn't possible before 2024.

2

Gig Economy Maturity

50M+ gig workers globally. 43M in Europe alone. They're comfortable completing smartphone micro-tasks for micro-pay. Deliveroo, Uber, DoorDash trained the supply side.

We harvest the infrastructure they built.

3

AI Extraction Quality

GPT-4V class models extract structured data from photos at >90% accuracy. A shelf photo becomes JSON in 3 seconds. What required a trained analyst now costs $0.20 of compute.

The cost curve makes our margin work.

The 24-Month Window

- → US gig platforms haven't noticed Europe
- → BeMyEye has no consumer tier — ever
- → Enterprise AI buyers signed up 3× faster in 2025
- → On-device GDPR competitors can't retrofit

THE PRODUCT

The platform your agents love to use and your customers can't stop checking.

CUSTOMER SIDE

"Post a task in 90 seconds"

1. Enter location + task type (shelf audit, crowd check, brand compliance)
2. Select delivery: 4-hour express or 24-hour standard
3. Pay by card — self-serve, no sales call needed
4. Receive AI-extracted JSON report + natural language summary

Shelf Audit | Crowd Check | Brand Compliance | Pricing Intel | Site Inspection

AGENT SIDE

"Earn $15 on your morning commute"

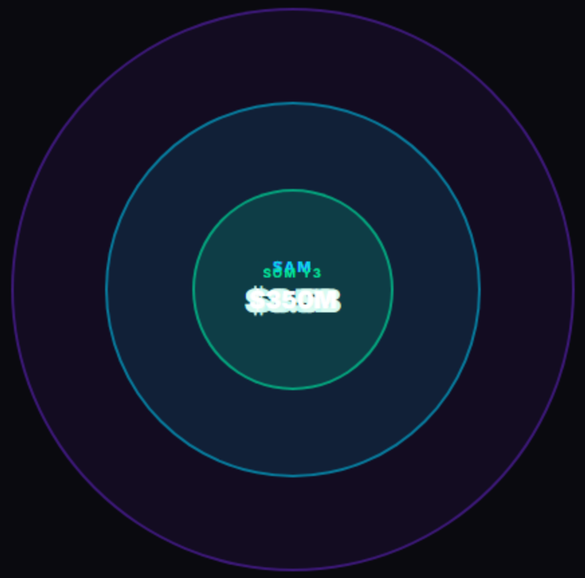
1. Turn on Commute Mode before leaving home
2. Pre-accept 3 tasks matched to your exact route
3. Complete each task in 45–90 seconds — no detours needed
4. Earn $14.50 before you arrive at work

Commute Mode — first gig platform that works *with* your existing life.
LTV:CAC ratio 90:1 for commute-mode agents.

90s	4 hrs	45s	$14.50
To post a task	To deliver results	Per task for agents	Agent earn per commute

MARKET SIZE

$35B market, 22% CAGR — and the largest segment has never had a self-serve product.



TOTAL ADDRESSABLE MARKET — $35B

Physical world intelligence: retail intelligence + mystery shopping + insurance field services + **AI training data** + brand compliance + site intelligence. Growing at **22% CAGR**.

SERVICEABLE ADDRESSABLE — $8.5B

Crowdsourced, on-demand, visual intelligence — the portion addressable by a smartphone-first platform. **The training data market alone: $19.6B by 2033 (24.3% CAGR).**

SOM YEAR 3 — $350M

50K enterprise customers ($66K ACV avg) + 2M SMB customers ($500 ACV) + 50M consumer task credits.

The Untapped Segment

BeMyEye: $35M revenue, enterprise-only, 15 years building. Field Agent: enterprise-only. Trax: hardware + enterprise only. **The consumer/SMB tier has never been served. That's $3–5B of market that doesn't exist as a category yet.**

BUSINESS MODEL

Three tiers. One platform. 55%+ gross margin.

TIER 1

Consumer

$5–$25

52% gross margin

→ Pay-per-task credit wallet
→ App store + viral acquisition
→ Real-time crowd intelligence
→ No sales motion needed

TIER 2

SMB

$49–$749/mo

62% gross margin

→ Self-serve subscription
→ 5–150 tasks per month
→ Content + PLG acquisition
→ Shopify + Faire partnerships

TIER 3

Enterprise

$2.5K–$50K/mo

58% gross margin

→ Annual contracts, API access
→ 200–10,000+ tasks/month
→ Founder sales → AE
→ Custom extraction pipelines

HIDDEN UPSIDE

Training Data

$2.4M/mo

95% gross margin

→ Every task produces labeled real-world visual data
→ $0.10–0.15/image at scale
→ Month 36 projection
→ Incumbents don't have consumer scale

$14.00
Customer Revenue

−

$5.60
Agent Payout (40%)

−

$1.26
AI + Infra + Payment

=

$7.14
Gross Profit (51%)

TRACTION

What two people and an AI stack built in 8 weeks.

WHAT WE BUILT

- ✓ Agent app (iOS + Android) — Expo/React Native, live and functional
- ✓ Customer portal — Next.js + Supabase, full task posting flow
- ✓ AI extraction pipeline — GPT-4V + custom validation layer
- ✓ Route-matching algorithm — geospatial corridor matching
- ✓ 3-tier pricing engine — consumer, SMB, enterprise
- ✓ On-device face redaction — GDPR-native, pre-upload

WHERE WE ARE

- → Pre-launch — MVP complete, entering first pilots
- → First enterprise pilots in active conversations
- → Agent waitlist building — targeting 500 in London by Month 2
- → BeMyEye pricing benchmark: confirmed 4× advantage on task cost
- → GDPR compliance architecture designed; DPO engaged

Why Pre-Launch Is the Right Time to Raise

We're raising to launch — not to survive. The product works. The unit economics model is validated from comparables. The window is real: BeMyEye hasn't shipped a meaningful update since 2020. The gig platforms are distracted. **We're asking for $5M to prove 3 cities and 3 tiers — then raise at $50–100M.**

Burn rate: $30K/month. Full-featured MVP: built. That's the AI-native advantage in action.

GO-TO-MARKET

Beachhead → expansion → the physical world intelligence default.

NOW → MONTH 6

1

Beachhead

- → CPG shelf audits in 2 US cities + London
- → 10 enterprise customers + 500 agents per city
- → Field Agent charges $30–175/task at 2-week turnaround — we deliver in 4 hours for $8–25
- → First Unilever/Reckitt conversation by Month 3

→ $98K MRR by Month 6

MONTH 6 → 18

2

Multi-City Expansion

- → 8 US cities + 5 EU cities (London, Amsterdam, Berlin, Barcelona, Paris)
- → SMB self-serve product launches → content + PLG
- → 15,000 active agents by Month 18
- → One EU enterprise anchor (Unilever/Heineken) = opens every enterprise door in Europe

→ $822K MRR / $9.87M ARR by Month 18

MONTH 18+

3

Category Creation

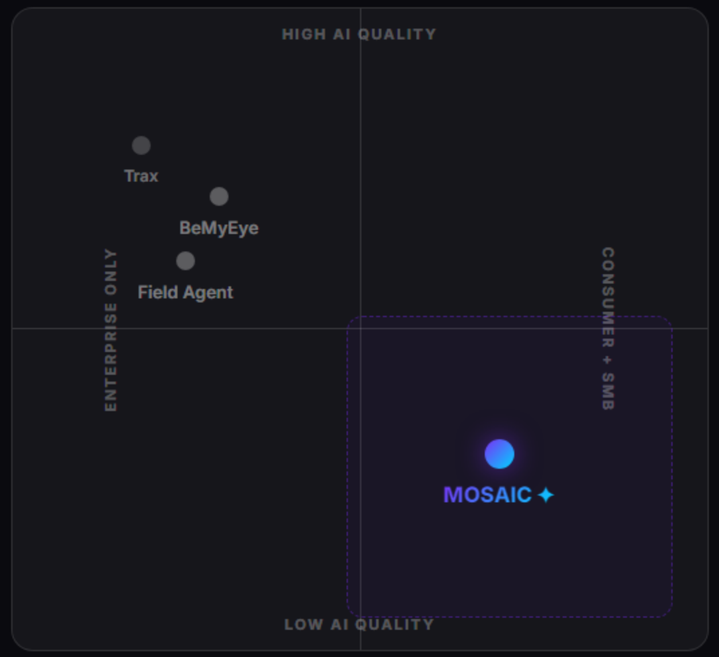
- → Consumer brand: "the app you use to check a place"
- → Training data licensing → $2M+/month at scale
- → Data network effects: more tasks → better AI → more customers
- → Series A raise begins Month 16 at $9.87M ARR trigger

→ Series A: $50–100M valuation

The Data Flywheel: More Tasks → More Training Data → Better AI Models → Lower Task Cost → More Customers → Data Licensing Revenue

COMPETITIVE LANDSCAPE

We occupy white space no incumbent has ever entered.



FEATURE	FIELD AGENT	BEMYEYE	TRAX	MOSAIC
Consumer tier	✗	✗	✗	✓
AI extraction	✗	✗	~	✓
<4 hour SLA	✗	✗	✗	✓
Route matching	✗	✗	✗	✓
On-device GDPR	✗	?	✗	✓
Self-serve	✗	✗	✗	✓
Training data tier	✗	✗	✗	✓

BeMyEye reached $35M revenue in 15 years with enterprise-only, sales-led, slow. Mosaic is building for the era where a brand manager gets shelf data in 4 hours for $50 without a sales call — and where the same platform serves anyone with a one-time question about a physical place. **That's not a feature. That's a category.**

THE TEAM

The two people who can build this — and the AI team they've assembled.

COMMERCIAL CO-FOUNDER · CEO

[CEO Name]

Commercial Founder — Sales, CPG, Enterprise GTM

- → Deep CPG industry background — personally managed competitive intelligence budgets at major brands
- → Enterprise SaaS sales experience — knows every procurement pattern at Tier 1–3 CPG
- → Understands the buyer psychology that makes a brand manager pay $500/month before a sales call

TECHNICAL CO-FOUNDER · CTO

[CTO Name]

Technical Founder — Mobile, AI/ML, Real-Time Systems

- → Mobile engineering experience at scale — shipped consumer apps used by millions
- → AI/ML background — built real-time on-device inference pipelines
- → Geospatial systems expertise — route-matching and location-aware architectures

THE AI TEAM — 12-PERSON OUTPUT AT $30K/MONTH BURN

Claude Code + Cursor
4× engineering velocity

v0 + Figma AI
Design without design headcount

Expo + Supabase
Full-stack, no infra team

GPT-4V Pipeline
Enterprise extraction product

We built a complete three-tier marketplace MVP in 8 weeks at **$30K/month**. That's the AI-native founding advantage.

FINANCIAL PROJECTIONS

$10M ARR in 18 months — three tiers building compounding revenue.

MONTH	T1 CONSUMER	T2 SMB	T3 ENTERPRISE	TRAINING DATA	TOTAL MRR
Month 3	$6,600	$6,225	$22,000	—	**$34,825**
Month 6	$24,200	$24,900	$49,500	—	**$98,600**
Month 12	$88,000	$107,070	$137,500	$22,000	**$354,570**
Month 18	$220,000	$242,100	$275,000	$85,000	**$822,100**
Month 24	**$550,000**	**$398,800**	**$467,500**	**$210,000**	**$1,626,300**

SERIES A TRIGGER

$9.87M ARR

Month 18 run rate → Series A raise begins Month 16

KEY ASSUMPTIONS

Agent payout: **40% fixed** (non-negotiable — trust signal)

Blended gross margin: **55% early → 65%+ at scale**

Enterprise churn: **2.5%/month** — SMB: 5% — Consumer: 15%

3-city launch by Month 4; **8 cities by Month 12**

Burn pre-seed: **$30K/month** — seed: $120K/month (8-person team)

Break-even: **Month 20** on seed capital

REVENUE COMPOSITION AT MONTH 24

$1.6M MRR from 3 commercial tiers

$210K MRR from training data (95% GM)

115% target Net Revenue Retention

Built bottom-up from task economics, not top-down market %

THE ASK

We're raising $5M to prove three cities and three tiers.

SEED ROUND

$5M

Structure: Priced round, Series Seed preferred

Pre-money valuation: $20–25M

Runway: 18 months to Series A metrics

Series A target: $50–100M at $10M ARR

USE OF FUNDS

Engineering team (3 hires)	30%
Agent acquisition (4 cities)	20%
ML / AI model development	10%
Enterprise sales (1 AE)	10%
Marketing (SMB + consumer)	10%
Legal / compliance (GDPR, SOC 2)	6%
Operations (city launches)	8%
Buffer	6%

WHAT $5M BUYS

- ✓ 4 cities live: Atlanta, Dallas, London, Amsterdam
- ✓ 15,000 active agents — density for fulfillment >80%
- ✓ 50 enterprise customers + 600 SMB subscribers
- ✓ $10M ARR run rate by Month 18
- ✓ GDPR compliance architecture completed — EU launch ready
- ✓ Series A raise begins Month 16

We are not building a field intelligence product.

We are building the infrastructure platform that sits between the physical world and every organization that needs to understand it.

Starting in CPG. Ending everywhere.
